(54) Title: SYSTEM AND METHOD FOR AUTOMATICALLY LAUNCHING AND ACCESSING NETWORK ADDRESSES AND APPLICATIONS

(57) Abstract: A system and method are provided for automatically launching one or more computer-executable processes (such as network browsers and other applications) simultaneously while requiring minimal input from or actions by the user. The system and method operate securely and privately, and provide the capability to automatically initiate the processes such that they access specific user data files or web addresses associated with each respective process, even when such access requires input of authorization or access information such as passwords.
